

## REVIVE

### Therapeutic Hypothermia Management System with Cerebral Function Monitoring for Neonates

Revive is first of its kind servo-controlled Whole Body Cooling device with Amplitude Integrated EEG (aEEG) for effectively treating Hypoxic Ischemic Encephalopathy (HIE) in Neonates.

### REVIVE'S UNIQUE FEATURES

- Servo-Controlled & Fully Automated
- Whole body Cooling and Warming
- Bio-Compatible Body Wrap
- Transport Enabled
- Cerebral Function Monitoring (Optional)

- Precise Temperature Control
- Minimal Nurse/Clinician intervention
- Easy setup in minutes
- Configurable Treatment settings
- Controlled Re-warming on same device
- Safety features for effective thermo-control
- Intuitive Touch Screen
- Display of Temperature trend
- USB retrieval of treatment data

### NICU friendly

- Simple and easy User Interface
- Bright and Clear display
- Screens visible from across NICU
- Fits in NICU carts and warmers

### Performance

- Temperature control within +/- 0.3°C
- Configurable Cooling and Rewarming rate
- Restart with same settings on Power failure
- Temperature recording every minute
- 5 Lead aEEG on the device (optional)

### Safety Features

- Automatic Safe mode switching
- Audio and Visual alerts
- Automatic Rectal Probe slip detection
- Over-cooling and warming protection

### Portability

- Easy to carry
- Ambulatory Support
- UPS backup (optional)

### Startup Kit

Wrap | Rectal Probe | Skin Probe | Coolant

### Optional Accessories

EEG Electrodes | Protective sheet | UPS | Trolley with Poles | Side-rail | Buckle and Straps
